

smartglass

 ROTHSCHILD

Rothschild Bank HQ

London, England

Completed: 2011

SmartGlass Volume: 300m²

Design by OMA

SmartGlass allows for easy and instant permutations of space, delivering privacy to carry out important meetings and presentations without distractions from onlookers and co-workers.

SmartGlass provides simple and reversible states of transparency with no alteration in light level making it an ideal solution for office interiors where ample lighting is fundamental.

SmartGlass was used in the Rothschild Bank HQ in numerous partitioning systems to separate private meeting rooms and offices from the rest of the floor.

SmartGlass was also used in Lord Rothschild's office on the top floor of the building in a floor-to-ceiling capacity opening up the entire space with natural light, whilst allowing privacy when required.
